OVERVIEW

Software Engineer with over 15 year developer experience, i have worked for companies from financial to health business, always loved to learn and use new developing languages, technologies and methodologies. Always looking to evolve. Name the technology and i will make it work.

WORK EXPERIENCE

Cloud Engineer

Avi-on

11/2021- Now

We work on cloud area of the company that currently serves IoT solutions, mostly on electric devices that connect via Bluetooth mesh. We maintain, develop from design and architecture many microservices and also some Uis.

Knowledge:

- React, Node, Ruby, AWS (timestream, RDS, elasticache, etc), jenkins, RabbitAMQP, Nats

Software Architect/Software Engineer

AFIP

04/2019 - 10/2021

We work under the CFO to stablish the technology stack to use and where the market and other global technology players are going in order to stablish our own. We work designing PoCs and working with bussiness areas inquiries. Latest projects include using prometheus/zabix-grafana for monitoring, Kafka, Zookeeper, Schema Registry for queues projects, ELK stack for logging, Jenkins CI/CD project.

Senior Software Engineer

Resolvit

01/2019 - 03/2019

Developed full-stack project for NBA players future sales, running on blockchain network. Was a great learning project with cool new tech stack.

Knowledge:

- Front-end: Angular, Typscript, CSS
 - Back-end: React.
 - IDEs: Visual Code
-

- Jenkins
-

Senior Java Developer

Medife

02/2012 - 12/2018

Develop the intranet that interjoined 2 business models, the application is used by the company to give day to day user feedback as well as invoicing. Front and backend development. A Bit analysis as well, deployment to servers, designed automated testing as well as alert boards for wrong data. A Bit of Web services and some legacy app maintenance.

I learned a lot of the health business and from the last job i acquired a many new technologies to my knowledge, the best ones, JBPM and Oracle PL/SQL.

Skills:

- Front-end: JSF, Primefaces and a bit of JQuery, Maven, Spring
- Back-end: Java, JBPM, Dozzer mapping, mybatis and Oracle PL/SQL.
- IDEs: Eclipse, Toad
- Jenkins

Freelance Developer

2017 - Today

Developed a Mobile application for a new company that worked mainly for the crop business, the application uses the camera to take pictures and a machine learning algorithm detected which bug attacks the crop and redirects to bug killer poison.

This product was amazing for my learning process, i acquired the knowledge to develop an app for iOS and Android, learned Node.js, some more DB, and got to know google apis for the entire app, also i was the entire team so i got to do a lot of research of my own.

Skills:

- Appcelerator through Node.js, SQLite.
- Android and iOS Development
- Google maps geo-location Apis
- Virtual Machine, Mac on Windows to develop for iOS.
- Mobile app Memory management coding.

Senior Java Developer

IT Resources

12/2011 - 01/2012

Development of a new migration application for Fravega client, i was a part of a small team that did de requirement analysis and develop the solution application. it was a short lived project for me though, IT Resources client, Medife, needed a developer and i was selected to go there.

I really liked the idea to work in a software factory, and it was a great experience but i don't regret moving on.

Skills:

- Front-end: JSF, Primefaces and a bit of JQuery
- Back-end: Java, JBPM, Dozzer mapping, mybatis.
- IDEs: Eclipse

Senior Java Developer

Tekii S.R.L.

09-2008 - 11/2011

Development and maintenance of a health application that was designed to give trazability for highly specialized cancer medicine, the application was a small ABM

like web application that different parties consulted to see the entire process of a particular medicine. This project and this company for me were amazing, it was a very small company that grew super fast and had a lot of projects with very open minded technologies approach. In there i had mi first opportunity to lead a 3 people team for a python project that was cancelled after a while.

Skills:

- Front-end: Ruby on Rails, Python, CSS (a lot)
- Back-end: MySQL.
- IDEs: Eclipse
- Mainly working on Unix System (Ubuntu)

Junior Java Developer

Logismata A.G.

09/2003 - 08/2008

Development of plugin projects for existing client/server application.

The company implements systems for Swiss banks and financial companies.

It was my first job and i think it was the one that marked me from the beginning, even though it was a small company, i had the best team mates and it had a very strong process oriented development, TDD, Automated Testings, super quality oriented development.

I Had a blast there and learned a lot, even though the system was not super technology speaking new.

Skills:

- Front-end: Java, Swing.
- Back-end: C, C++.
- IDEs: NetBeans, Visual Studio.
- JUnit.

QUALIFICATIONS

Software Engineer

Universidad Abierta Interamericana

2010 - 2015

Through this university i got to know a lot about Microsoft Development technologies, i actually got to know VisualBasic, Asp.net, SqlServer, IIS, through several projects including the thesis ones. The code can be seen at my github.

English: Bilingual written and oral.

INTERESTS

Sports (Soccer, Running)

Scuba Diving (Certificated Open Water Diver)

Cooking

Welding enthusiast

Love to learn to new things

Travelling
